Developing effective emergency management partnerships in remote northern Australian communities [4]

Through extensive consultations undertaken with regional emergency management agencies and Indigenous community partners across northern Australia, this project has established that an ongoing priority is to support the building of more effective emergency management agency-community partnership arrangements in remote communities, based on empowerment of and better engagement with community governance structures. This project explored community governance issues and aspirations among Yolngu and Bininj (Aboriginal people from east Arnhem Land and central and west Arnhem Land respectively) in two major communities: Galiwin'ku and Ramingining. In recognising persistent and systemic marginalisation issues, such as poor communication and engagement, project leaders sought to provide a stronger foundation for partnerships at a community level and a clear direction to emergency management and other agencies to adopt for more effective and mutually beneficial partnership arrangements in service delivery.

### Description

Natural hazards in the remote Northern Territory such as cyclones have arguably been managed as best as possible given the typically insubstantial relationships emergency management agencies have with traditional Aboriginal landowners and their wider communities. Preparation and response to the two cyclones, Lam (Feb. 19-20) and Nathan (March 22), that struck east and central Arnhem Land in 2015 are a case in point, prompting practical research into how we can strengthen existing governance arrangements in remote areas to promote and enrich such relationships. This project extends a suite of projects hosted by Charles Darwin University under the Northern Hub of the

CRC, collectively addressing 'building capacity in north Australian remote communities.

Under the collective theme of developing effective emergency management partnerships, the project focused on two of the several communities in Arnhem Land struck by cyclones Lam and Nathan – Galiwin'ku and Ramingining. The overall objective of the project was to inform effective emergency management agency community partnership arrangements in remote communities based on enhanced understanding and empowerment of underlying community governance structures. Lessons learned from the undertaking of this project were used to develop a 'protocols framework' to help inform the development of effective agency-community emergency management partnerships in remote community locations across northern Australia.

This research has identified a common set of core governance issues and priorities needing to be acknowledged and addressed to improve implementation of emergency risk management arrangements in remote communities. This work has helped these remote communities, and hopefully others, find voice to more effectively engage in the emergency management conversation, and in partnership building at local and national levels. It has also shown that most agencies involved are open to, if not keenly interested in greater equity with communities in engagement but are uncertain and/or systemically blind to how they may initiate and progress real and effective change in remote emergency management.
