What information is needed for disaster governance? How to achieve national consistency in information?

- Development of natural hazards exposure information modelling framework
- Stakeholders were engaged for their collective views on information requirements for informed decision making.
- Assessed current information providers supporting disaster risk reduction.
- Analysing gaps and prepare a consistent and standardised exposure information framework
- A road map of the framework for reliable information for improved informed decision.

Australian Natural Hazards Exposure Information Framework

DISASTER RISK REDUCTION
Planning, Preparation Response, Recovery, Resilience
