PSYCHOLOGICAL PREPAREDNESS

An individual's anticipated psychological and emotional ability to cope with the threat, uncertainty, unpredictability and confusion that may be experienced in the warning phase and at a disaster's point of impact (Boylan, 2016)

- What do residents and emergency services know about psychological preparedness?
- What are the terms, phrases and delivery methods which may be most effective in communicating this?
- What additional training and materials would help emergency services deliver education about emotional preparedness?

Tip sheet

**FIRST THINGS
FIRST: PREPARE
YOUR MIND**

ROAD SUBJECT TO

A photograph of a flooded street. In the foreground, a white car is partially submerged in dark, murky water, with only its roof and the top of its windows visible. The water reflects the surrounding environment. In the background, there are lush green trees and a street with a few people walking. A red stop sign is visible on the left side of the street. The overall scene depicts a significant flooding event.

The disaster and emergency managers

CHANGING OUR PRACTICE

Anticipate Stress

Recognise Feelings

Manage Reactions

Are you 'Emotionally Prepared' for a disaster?

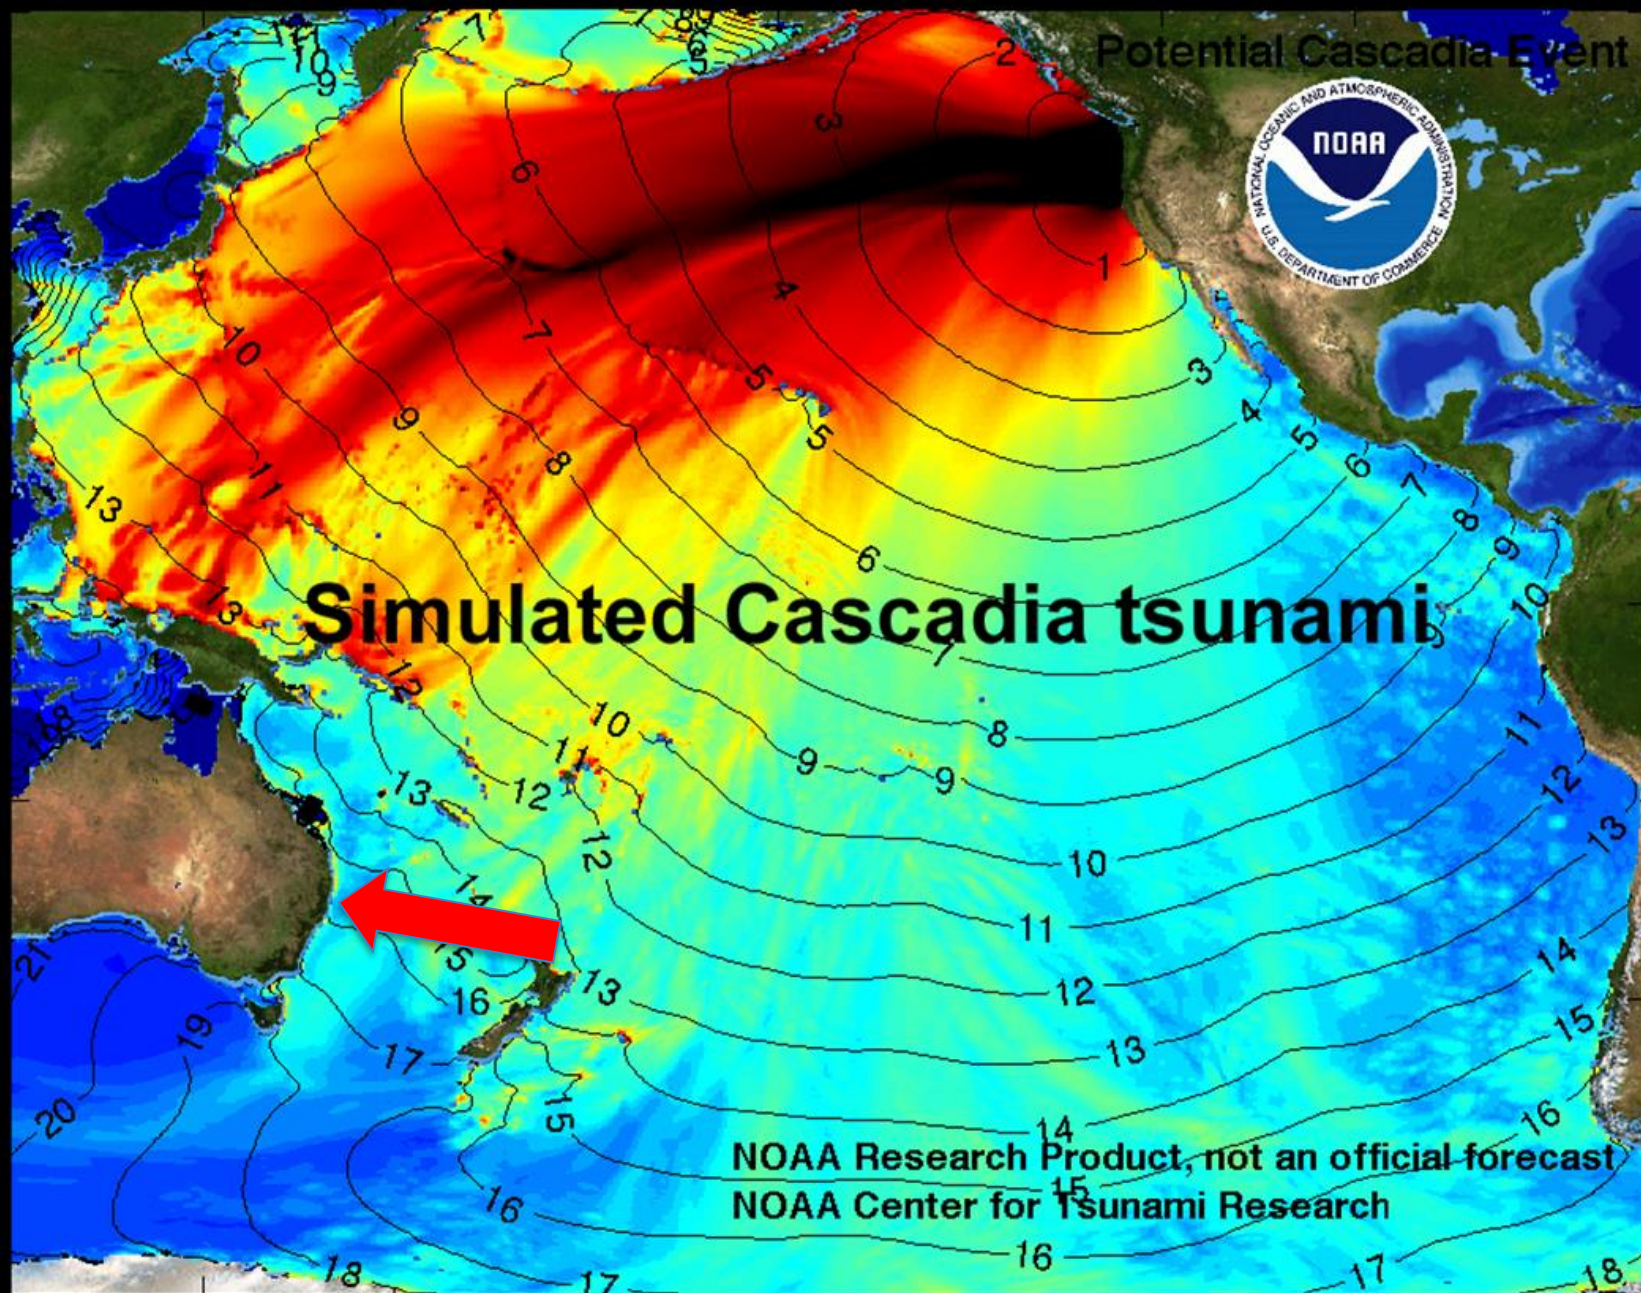

Those who haven't experienced a disaster event before can easily underestimate how **STRESSFUL** and **TERRIFYING** it can be.

Remember, how we think and feel affects our behaviour.

Everyone may **THINK**, **FEEL** and **ACT** differently in a disaster situation.

Bundaberg Regional Council recognises that being '**Emotionally Prepared**' for a disaster can help you to feel more confident and better prepared to make effective emergency plans and important lifesaving decisions.

After seeing and
hearing that
...how do you FEEL?
How are you behaving?
Talking faster?
Different tone? Rushing?

A 20-fold increase in the use of Council's interactive flood mapping

If we freeze it there,
we can see that strong
wind and rain will
impact your house in
12 hours...stay tuned
for flood warnings.
